IN THE SPECIFICATION

At page 6 from line 9 through line 23 please amend the specification as follows:

The release compositions of the present invention comprise additives for improved anchorage of release coatings comprising the reaction product

of:

- 1) $R^{E}_{h}Si(OR^{A})_{3-h}$ $R^{E}_{h}Si(OR^{A})_{4-h}$;
- 2) R^{vi}_iSi(OR^B) 34-i;

A catalyst; and

4) water

where R^E is an oxirane or epoxide containing radical having from one to forty carbon atoms, R^{vi} is selected from the group consisting of two to forty carbon atom terminal olefinic monovalent hydrocarbon radicals, R^A is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals; R^B is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals, where h varies from 1 to 3 and where i varies from 1 to 3. The preferred catalysts are either an organo tin or organic acid such as formic acid.

At page 9 from line 5 through line 19 please amend the specification as follows:

The release compositions of the present invention comprise additives for improved anchorage of release coatings comprising the reaction product

W

of: SUB_

- 1) $R^{E}_{h}Si(OR^{A})_{3\underline{4}-h}$;
- 2) Rvi_iSi(OR^B) 43-i;

3) A catalyst; and

4) water

where R^E is an oxirane or epoxide containing radical having from one to forty carbon atoms, R^{vi} is selected from the group consisting of two to forty carbon atom terminal olefinic monovalent hydrocarbon radicals, R^A is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals; R^B is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals, where h varies from 1 to 3 and where i varies from 1 to 3. The preferred catalysts are either an organo tin or organic acid such as formic acid.

At page 10 line 15 through page 11 line 3 please amend the specvification as follows:

The release compositions of the present invention comprise:

(A) additives for improved anchorage of release coatings comprising the reaction product of:

5clb

- R^EhSi(OR^A)3<u>4</u>-h;
- 2) $R^{vi}Si(OR^B)$ 34-i;

3) A catalyst; and

4) water

where R^E is an oxirane or epoxide containing radical having from one to forty carbon atoms, R^{vi} is selected from the group consisting of two to forty carbon atom terminal olefinic monovalent hydrocarbon radicals, R^A is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals; R^B is selected from the group consisting of one to forty carbon monovalent hydrocarbon radicals, where h varies from

R3

1 to 3 and where i varies from 1 to 3; the catalyst can be either an organo tin or formic acid and coating compositions comprising:
